

DC track light dimmable driver DDET(S) Series suffix D(DALI-2 DT6)

EMC
Passed

Features

- Support DALI-2 DT6 control
- Not polarity
- 16-level current output can be realized by DIP-switch
- Soft dimming and flicker-free at any brightness, meets the new requirements of ErP certification
- Using HPC patented technology, at any dimming level, the brightness of the luminaries is the same
- Dimming range 0.1~100%, output current accuracy 2%
- Standby power input < 0.5W, meets the requirements of ErP certification
- Intelligent LED hot-plug protection function (No more than 5 sets at the same time)
- Suitable for STUCCHI standard housing
- SELV and Class III design, suitable for use outside of the luminaire
- Compliance with CE, DALI-2 and other certifications
- Nominal life-time up to 100,000 h
- 5.5-year guarantee

Interfaces

- DALI-2(DALI-2 DT6)

Functions

- Protective features (short-circuit, overload, no-load, hot plug-in protection)

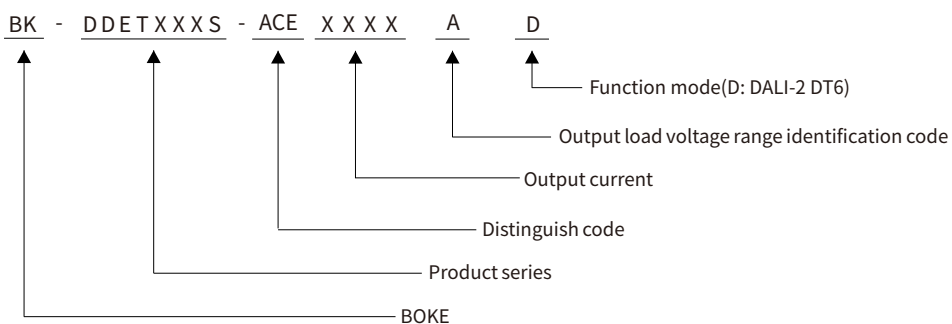

Suitable for lights

- Suitable for DC track light

Typical applications

- LED indoor lighting
- LED office lighting
- LED architectural lighting
- LED commercial lighting

| RF | N/A |

Remarks

- 1.By default, all parameter are measured at 48VDC input, 50Hz, full load and 25°C of ambient temperature.
- 2.when the driver is used with the luminaire, the EMC of the whole luminaire needs to be tested.

Efficiency vs load

Operating window

Functions

Output short-circuit behaviour

- Output short-circuit will not damage the driver.
- After removing the short circuit fault, the driver will automatically resume output.

Output no-load operation

- Output no-load will not damage the driver.
- Please turn off the driver first if you need to connect the LED load.

Output overload protection

- The LED driver turns off the output if the output voltage range is exceeded.
- The output will be activated again after restart the LED driver .

Driver restart method

There are two ways to restart the driver:

- Through the AC input:disconnect the AC of the driver and power it again.
- Through dimming interface.
- DALI:send "OFF" command first,then send "MAX" command.

Output hot plug-in

- This function is used to prevent LED light that are far below the driver's no-load voltage burnout when hot plugged into a powered driver output.
- This product comes with a default hot plug protection function at the factory and cannot be turned off.

- Note:

Due to the hot plug-in protection function of the driver, the following applications may not achieve the expected effect:

1. When the output of the driver is connected to the color temperature switch:
When the switch is used to change the color temperature, the hot plug-in protection of the driver will be triggered, and the LED will not be lit.
2. When the LED driver is used in conjunction with a self-contained (independent) emergency control device:
Use the self-check test switch of the emergency control device to test the emergency function and when exiting the emergency mode, the driver's hot plug-in protection will be triggered and the LED will not be lit.

The above two applications should use drivers without hot plug-in protection function to achieve the expected working effect. It is recommended to choose our company's drivers without hot plug-in protection function or those that support configurable closing of hot plug-in function.

DALI dimming application

Wiring diagram

Remarks:

- Standard DALI control line voltage range:9.5V to 22.5V ,type 16V.
- The two DALI control lines polarity-reversible.
- Max. 64 DALI drivers per DALI control line.
- The maximum distance length of the DALI control line is 300m at $2 \times 1.5\text{mm}^2$.
- DALI bus can be wired together with any mains voltage cables, but separate wiring is recommended.
- The configuration parameters of the driver can be set through the DALI configuration tool or DALI application controller during installation, such as setting device address, group address, power-on level, bus-failure level, scene level, fade time, dimming curve, etc.

Please refer to the table below

| Cable size | Distance |
|---------------------------------|----------|
| $2 \times 0.50\text{mm}^2$ | max.100m |
| $2 \times 0.75\text{mm}^2$ | max.150m |
| $2 \times 1.00\text{mm}^2$ | max.200m |
| $\geq 2 \times 1.50\text{mm}^2$ | max.300m |

Power-on level :

When the driver is in DALI-2 dimming mode, the factory default level after each power-on is the brightest.

The power-on level can be set through the DALI configuration tool or DALI application controller during installation, and can be set to memory or fixed any brightness (such as off, darkest, 50%, etc.).

Note: The recommended setting for the default factory power-on level of the DALI-2 driver is the brightest in the DALI-2 standard.

Dimming curve

Remarks: The dimming curve can be selected by DALI configuration. The default is logarithmic dimming curve.

Installation

Unit:mm

DDET024S-ACE

Installation note

LED Hot plug-in

- Hot plug-in is not supported due to residual output voltage of > 0 V.
- If a LED load is connected the device has to be restarted.
- Restart can be achieved by re-powering the driver or executing a on/off command (action) through the control interface.

Installation requirements

- The driver should be installed in a dry, acid-free, oil-free, fat-free environment.
- The installation ambient temperature of the driver shall not exceed the value of T_a at any time.
- **Please be careful not to damage the electronics during assembly.**
- **All electronic components shall not be squeezed after assembly.**

Wiring guidelines

- All connections must be kept as short as possible to ensure good EMI behaviour.
- Max. length of output wires is 0.5 m.
- Incorrect wiring can damage LED modules.

Replace LED module

1. Mains off
2. Wait more than 5 seconds
3. Remove LED module
4. Connect LED module again
