DESCRIPTION

The LM4558 device is a monolithic integrated circuit designed for dual operational amplifier. The high common-mode input voltage range and the absence of latch-up make these amplifiers ideal for voltage-follower applications. The devices are short-circuit protected and the internal frequency compensation ensures stability without external components.

ABSOLUTE MAXIMUM RATING ⁽¹⁾

CHARACTERISTIC	SYMBOL	Range.	UNIT
Supply Voltage ⁽²⁾	V_{CC}	± 22	V
Differential Input Voltage ⁽³⁾	$V_{I(DIFF)}$	± 30	V
Input Voltage ^{(2) (4)}	V_{IN}	± 15	V
Store temperature range	T_{OPR}	-65 ~ 150	°C

(1) Stress beyond those listed under absolute Maximum ratings may cause permanent damage to the device. Those indicated under recommended operating conditions is not implied. These are stress ratings only, and functional operating of the device at these or any other conditions beyond Exposure to absolute maximum rated conditions for extended periods may affect device reliability.

(2) All voltage values, unless otherwise noted, are with respect to the midpoint between V_{CC+} and V_{CC-} .

(3) Differential voltages are at $IN+$ with respect to $IN-$.

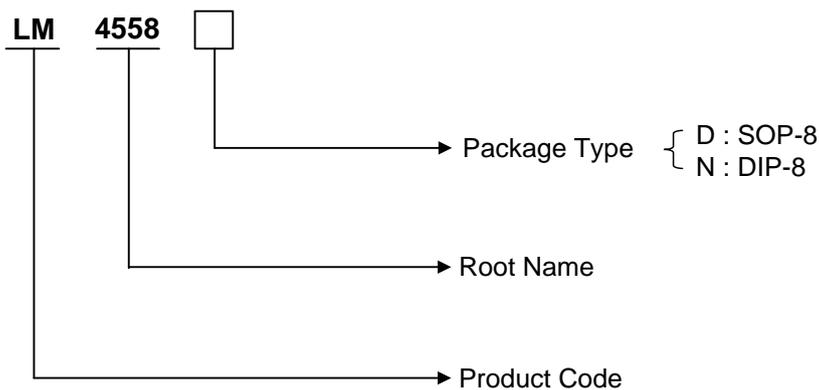

(4) The magnitude of the input voltage must never exceed the magnitude of the supply voltage or 15V, whichever is less.
